Riudellots de la Selva, 10th March 2008

Dear Sirs

The European REACH legislation (Regulation EC N.1907/2006) came into force on 1st June 2007. This legislation concerns any substance whose volume of consumption exceeds one tonne per year in the EU. These substances cannot be produced or imported in the EU (including preparations and mixtures) unless all components are registered.

Substances included in our catalogue which need to be registered will be pre-registered by our company or by our suppliers, depending on the characteristics of each product.

The supplied products must be registered for their specific uses, as it will not be possible to use a substance if it has not been registered for a specific use. It is therefore necessary to obtain an exact description of the applications for each used substance to be able to generate the chemical security report demanded by REACH, which must cover all known applications.

Following the CEFIC recommendations, Productos Concentrol will use the Standard CEFIC questionnaire for this purpose. As soon as the guide with the definition of applications and categories of exposition is published, and once the questionnaire has been fully updated, we will contact you.

Your contact person in our company for all REACH communications is:

Elena Escatllar
eescatllar@concentrol.com
tel. 972478091
fax. 972477115

Jaume Guardia Pont
